RE: Bi-Monthly Groundwater Monitoring per GMMRP, September to October 2021
Crystal Geyser Roxane, Cabin Bar Ranch, Inyo County, California

Dear Dr. Steinwand:

This letter summarizes hydrologic monitoring activities conducted in September and October 2021 by TEAM Engineering & Management, Inc. (TEAM), in support of the Crystal Geyser Roxane (CGR) Cabin Bar Ranch Bottling Plant Groundwater Monitoring, Mitigation, and Reporting Plan (GMMRP).

Background

As outlined in the GMMRP for Cabin Bar Ranch, dated June 18, 2014, a network of groundwater monitoring wells has been established for collection of water level and water quality data in support of the proposed Cabin Bar Ranch Bottling Facility (see Figure 1). The conditions of the GMMRP required a minimum of four months of continuous baseline groundwater data collection to characterize pre-project conditions and to assess the functionality of the monitoring system. In February 2016, TEAM was retained by CGR to collect the required baseline groundwater data and report directly to the Inyo County Water Department (ICWD), as an objective third-party monitor.

Baseline groundwater monitoring was initiated on March 1, 2016. The first four months of baseline groundwater monitoring data, including laboratory results of water quality samples, were summarized in the “Baseline Groundwater Monitoring Report, First and Second Quarter 2016” dated August 4, 2016. Monthly groundwater level monitoring activities continued, with bi-monthly reporting, until project pumping commenced in order to accurately document pre-pumping baseline conditions. Project pumping at the Cabin Bar Ranch Bottling Facility commenced on March 19, 2018.

In a letter to ICWD dated April 6, 2017, CGR provided a summary of the water level and water quality data to document pre-pumping baseline conditions and provided recommendations for the refinement of site-wide groundwater elevation trigger levels and water quality trigger levels in monitoring well OW-10m. In a letter dated July 6, 2017 the ICWD concurred with these recommendations, which formalized the project trigger levels discussed herein.

March 2020 marked the end of the initial 2-year post-pumping groundwater monitoring period as outlined in the GMMRP. In accordance with the GMMRP Section 6.1.1 and Section 6.1.2,

following two years of groundwater level and groundwater quality data, TEAM submitted to ICWD a report titled *Recommendations for Reduced Monitoring per GMMRP*, dated October 7, 2020. ICWD conditionally approved the recommendations in a letter dated November 1, 2020, requiring CGR to continue water level monitoring on a bi-monthly basis. The ICWD letter also required CGR to perform two more quarterly groundwater sampling events during the Fourth Quarter 2020 and First Quarter 2021, at which point the data and monitoring program were to be reassessed.

Additional monitoring recommendations were developed and presented by TEAM in the *Bi-Monthly Groundwater Monitoring per GMMRP, January to February 2021* report, dated March 12, 2021. ICWD conditionally approved the recommendations in a letter dated May 20, 2021, requiring CGR to continue water level monitoring on a bi-monthly basis with semi-annual groundwater sampling events to be conducted during the Second and Fourth Quarters of each year.

Water Level Monitoring

TEAM completed the October 2021 bi-monthly hydrologic data collection event at the GMMRP groundwater monitoring locations in the area of Cabin Bar Ranch (See Figure 2) on October 12, 2021. Static depth-to-water (DTW) measurements were collected by TEAM, as summarized in Table 2. Manual DTW measurements were referenced to a surveyed mark on the top of the well casing and converted to groundwater elevation (GWE), in feet above mean sea level. Any adjustments to the GWE calculation (e.g. for riser height) are included in the table.

Monitoring well datalogging systems (pressure transducers) have been installed and activated by CGR in all fourteen (14) GMMRP wells: CMW-2, MW-3, P-5, P-10, P-15, PAT-1, OW-7u, OW-7m, OW-8us, OW-9u, OW-10u, OW-10m, RP-1 and SS-1A (see Figure 2). During the October 2021 monitoring event, water level or pressure measurements were collected from all fourteen of the measuring points defined in the GMMRP.

On October 12, 2021, a round of manual DTWs were collected by TEAM personnel, and the transducer data were downloaded for the period of August 12 to October 12, 2021. Manual DTWs and corresponding GWEs are included in Table 2. Pressure readings were collected from OW-8us and OW-9u, which both remained artesian in October. The data from each datalogger were correlated to manual DTWs from the beginning of the data period, or to the closest correlated data point when necessary. Hydrographs of each well have been provided in Attachment A.

Water Quality Monitoring

The GMMRP for Cabin Bar Ranch required pre-pumping water quality monitoring to establish baseline conditions for the project. Baseline water quality sample collection was conducted in March, April, June, and September 2016. Due to delays in project implementation, and as agreed upon between CGR and ICWD, a final round of water quality samples representative of baseline conditions was collected on March 27, 2018.

Subsequent to the initiation of pumping in March 2018, the first round of quarterly water quality samples to be compared to the baseline dataset was collected in June 2018. Water quality samples have been collected quarterly from June 2018 to June 2021. The results of water quality analysis collected from GMMRP monitoring locations are summarized in Table 3.

The most recent water quality data from quarterly samples collected in June 2021 were presented and discussed in TEAM's *Bi-Monthly Groundwater Monitoring per GMMRP, May to June 2021* report, dated July 14, 2021. The approved water quality trigger levels for select wells are included in Table 5 for reference.

As indicated in the GMMRP Section 6.1.1, groundwater quality data is also required to be collected on a daily basis using sensors installed with the datalogging systems. Project monitoring wells OW-10m, OW-7u, OW-7m, OW-8us, OW-9u and P-5 were equipped with AquaTroll 200 transducers and were set to record Electrical Conductivity (eC) every 4 hours. Off-site wells CMW-2 and PAT-1 were also equipped with AquaTroll 200 transducers. The conductivity data is plotted on the hydrographs in Attachment A.

Production Well Totalizer Readings

Totalizer readings for the three Cabin Bar Ranch production wells (CGR-8, CGR-9, and CGR-10) were first collected on March 13, 2018, prior to the commencement of pumping on March 19, 2018, and during each subsequent monthly or bi-monthly monitoring event. Per the GMMRP and ICWD direction, the combined annual allowable pumping amount for the Cabin Bar Ranch production wells is 360 acre-feet per year. The first annual project pumping total, from March 19, 2018 to March 14, 2019, was approximately 155 acre-feet. The second-annual project pumping total, from March 14, 2019 to March 18, 2020, was approximately 263 acre-feet. The third-annual project pumping total, from March 18, 2020 to March 18, 2021, was approximately 280 acre-feet. The current annual project pumping total, from March 18, 2021 to October 12, 2021, is approximately 155 acre-feet. The totalizer readings and a summary of project pumping amounts are provided in Table 6.

Trigger Levels

A summary of baseline GWEs and water level trigger levels, based on drawdown (from baseline GWEs) or depth-to-water (P-15 only) for wells in which triggers have been established, is provided in Table 4. The reference baseline GWEs were approved by the ICWD in their July 2017 letter. During the October 2021 monitoring event, the water level for P-15 was greater than 5.4 feet below top of casing (btoc) for the third consecutive month in 2021. It should be noted that the proposed GWE trigger level for P-15 (5.4 feet btoc) is only applicable after 12 continuous months below this level. Therefore, the October 2021 measurement does not exceed the trigger level for this well. No GWE trigger levels were exceeded based on the water level data collected in October 2021, or during the project thus far.

Trigger levels for six water quality parameters, which apply to quarterly sampling data, are included in Table 5. No water quality trigger levels have been exceeded based on the quarterly samples collected during the project thus far. Per the GMMRP, an analysis of water quality data is required to be conducted to determine if an upward statistically significant trend in one of the water quality parameters indicates that a trigger level will be reached within a three-year period. Trends are reassessed approximately every six months with the addition of new data.

Operational Notes

A replacement transducer for well OW-7m was calibrated and installed on October 12, 2021. The transducer for well OW-7u malfunctioned and was removed from the well on October 12, 2021. The transducer has been shipped back to the manufacturer for repair or replacement and is expected to be reinstalled before the December 2021 monitoring event. Totalizer data from September 2021 was collected by CGR and reported to TEAM. Totalizer data from October 2021 was collected directly by TEAM. There were no other significant operational issues during the reporting period.

Anticipated Activities

Bi-monthly reporting and semi-annual groundwater sampling will continue according to the requirements of the updated GMMRP. Collection of depth to water and download of transducer data is anticipated to be conducted in December 2021. In addition, totalizer reads from all three production wells (CGR-8, CGR-9 and CGR-10) will be collected in November by CGR and in December by TEAM. Collection of semi-annual water quality samples is anticipated to be conducted in December 2021.

1) NM - not measured; NC = not calculated; UA - Data currently unavailable

2) DTW - Depth to water in feet (ft) below top of casing or other reference point. Pressure reading recorded in lieu of DTW when artesian

3) GWE- Groundwater elevation in feet above mean sea level (ft amsl). GWE for artesian wells OW-9u and OW-8us, calculated based on manual pressure readings and are shown in italics.

4) Well P-15 was dry to approximately 7 feet below top of casing during monitoring event.

5) Well OW-7m was artesian during the monitoring event with a water level above the top of casing.

The GWE listed is the surveyed top of casing.

1) ND indicates not-detected at or above the listed laboratory detection limit. NS indicates not sampled. NA indicates not analyzed. "-" indicated not applicable.

2) Constituents in bold (Na, Cl, CaCO₃, TDS, As, Ba) are proposed for water quality triggers in selected wells per GMMRP. See Table 5 for additional water quality trigger data.

3) Cells shaded in light gray represent water quality samples collected during the baseline data period.

4) The detection limit for Magnesium was raised to 0.5 mg/L during the February 2019 sampling event and all subsequent sampling events.

1) GWE: Groundwater elevation measured in feet above mean sea level. Baseline GWEs set July 6, 2017 and approved by Inyo County Water Department (ICWD)

2) Recent GWE measurement compared to Baseline GWE. Positive numbers indicate an increase in GWE from baseline, and negative numbers indicate drawdown.

3) "Trigger Level" from Table 1 of Geosyntec GMMRP and updated in April 6, 2017 letter. Negative values indicate drawdown from baseline GWEs.

4) Trigger for P-15 is Depth-to-Water (DTW) greater than 5.4 feet below top of casing in any continuous 12-month period. If exceeded, duration of exceedance is indicated in parentheses.
